PRESS RELEASE

The Apave Group launches its new ecosystem of digital solutions dedicated to risk management

Apave, an international reference in the field of technical, environmental, human and digital risk management, is stepping up the innovation dynamic announced in its strategic plan with the launch of its new ecosystem of digital solutions dedicated to risk management.

Through these digital solutions, which combine technical expertise and the power of digital technology, Apave enables its customers to simplify the management of their risks and their Health & Safety prevention actions and thus meet the new challenges facing companies.

Digital solutions designed with and for customers

Designed and tested with customers, Apave's digital solutions meet the challenges of protecting people, property and the environment. They are structured around 4 distinct and complementary ranges: **ALERT**, **CHECK**, **PILOT** and **PREDICT**.

- **ALERT**: solutions dedicated to real-time information feedback to identify and share alerts with a view to active resolution or prevention. This range supports the actions implemented by companies with MASE, ISO 45001 and/or ISO 14001 certification.
- **CHECK**: solutions for carrying out compliance diagnostics and measuring the improvement path that is or would be necessary to implement.
- **PILOT**: solutions enabling all or part of a risk management process to be piloted and its performance to be improved over time. Automation of corrective maintenance, performance management, a unique and intuitive BIM platform, dynamic management of professional risks, etc., are all functionalities covered and offered by this range of solutions.
- **PREDICT**: solutions offering a predictive approach to risk analysis by analysing the probability of occurrence.

Each of these 4 ranges of solutions is broken down by area of expertise with a "user needs" approach. Thus, the solutions respond directly and precisely to the specific needs of users according to their field of action:

- Health & Safety at work
- Environment
- Operations
- ...

Focus: a "Health and Safety" line to meet the new challenges facing companies

Promulgated on 2 August 2021, the so-called "Health at Work" law aims to strengthen prevention in companies and the safety culture in organisations and saw its first application decrees come into force on 1 April 2022.

Apave's range of digital solutions dedicated to "Health & Safety at Work" responds perfectly to the new challenges facing companies.

Indeed, risk assessment, which is a crucial step in a prevention approach, is often carried out and formalised in the "Single Document" in a static and administrative approach, whereas the content can and must become the heart of the action.

What our customers say ...

ALERT

"Combined with a proactive policy, the tool fulfils its mission perfectly. Today, around 115 people use it on a daily basis, mainly maintenance personnel working at our customers' sites and factory staff. We have seen a very significant increase in the feedback from our customer sites":

Thierry Renaud, Occupational Health and Safety Manager for the Industry Division of the REEL industrial group.

CHECK

"An instinctive and simple application. It is very appreciable, as are the pre-filled action proposals and the free comment zones for completing and refining the actions! The solution is also very visual, with graphics by area": Noémie Amalir, Occupational Health and Safety and Regulatory Training Officer, Le Puy du Fou ».

Noémie Amalir, Occupational Health and Safety and Regulatory Training Officer, Le Puy du Fou

PILOT

"The implementation of Pilot Exploitation has undeniably reduced the average time taken to lift a reservation. The issue of time remains a means of pressure to confirm or deny whether our installations are free of risk, and thus to achieve the "zero accident" risk

Mr Duffour, Head of Technical Services and Asset Management, Crédit Agricole Immobilier
